

NEP Postgraduate Programme in Communication & Media Studies

Programmes: M.Sc. Nutrition & Health Communication

Faculty: Interdisciplinary Studies

Second Year Syllabi of M.Sc. Nutrition & Health Communication

2024-25

Programme Degree	M.Sc.
Specialization	Nutrition & Health Communication (NHC)
Preamble	<p>In today's rapidly changing world, effective communication is paramount in promoting public health and well-being. The Master's in Nutrition & Health Communication (NHC) program is designed to equip women graduates with the specialized knowledge and skills necessary to become experts in the field of health communication, associated with knowledge of nutrition, pharmaceuticals, and the wellness industry.</p> <p>By combining a strong foundation in nutrition and health with advanced training in communication, media production, content creation, writing, and public relations, this program aims to cultivate a new generation of women media professionals who can effectively communicate complex health information to diverse audiences. These graduates will be well-prepared to play pivotal roles in shaping public health discourse, promoting healthy lifestyles, and driving positive social change.</p> <p>The Master's program is designed to equip students for careers in communication with a focus on nutrition & health through a comprehensive understanding of the intricate relationship between nutrition, health, and communication. This program merges the rigor of communication & media with nutrition and health combining creative and strategic thinking to produce skilled professionals capable of crafting effective health messages and campaigns.</p> <p>Students will develop the ability to critically analyse health information, design targeted communication strategies, and utilize diverse media platforms to promote healthy lifestyles and address public health challenges. Graduates of this program will be well-prepared to excel in a variety of roles, including health journalism, public relations, social marketing, health education, and policy development. They will be equipped to create impactful communication campaigns that inform, educate, and inspire individuals and communities to make informed choices about their nutrition and health.</p>
Programme Objectives	<p>This programme will enable the learner to:</p> <ul style="list-style-type: none">• Develop innovative health communication interventions to address public health challenges.• Develop communication strategies for specific target audiences.

	<ul style="list-style-type: none"> • Create health communication materials using varied communication technologies. • Analyse the effectiveness of existing health communication campaigns. • Identify the target audience for different health messages. • Apply key concepts in the context of public health and nutrition. • Examine the role of media in shaping public health perceptions.
Programme Specific Outcomes (POs)	Demonstrate a comprehensive understanding of the interrelationships between nutrition, health, and communication.
	Develop and implement effective health communication strategies for diverse audiences.
	Create innovative and engaging health communication materials across various media platforms.
	Conduct research to assess the impact of nutrition and health communication interventions.
	Collaborate with professionals from different fields to develop comprehensive health promotion programs.
	Communicate complex nutrition and health information clearly and effectively to various stakeholders through content creation
	Exhibit leadership skills in promoting healthy behaviors and advocating for public health policies.
Eligibility Criteria for the Programme	Women graduates, from any discipline, with minimum of 40 percent from AICTE/UGC recognized institutions. Students awaiting their final year results will be given provisional admission.
Intake (For SNTDWU Departments and Conducted Colleges) For affiliated Colleges	25 40

312211	Public Health Major (Elective)		
Sr. No.	Modules and Outcomes	Course Contents	Cr
Course Outcomes:	At the end of this course Learners will be able to- <ul style="list-style-type: none"> Analyse the core principles and historical foundations of public health theory and practice. Critically evaluate the social determinants of health and their impact on population health outcomes. Identify the major global public health challenges (e.g., infectious diseases, chronic diseases, environmental health issues). Appreciate the importance of collaboration between public health professionals, policymakers, and communities. Value the importance of cultural competency and building trust with diverse populations in public health interventions. Develop strong leadership and communication skills for promoting public health initiatives. 		
Module 1	Health and Well Being		1
	LOs: Learners will be able to <ul style="list-style-type: none"> Develop a critical perspective on the interpretation of epidemiological data and its limitations. Foster a commitment to data-driven decision-making in public health practice. Appreciate the importance of epidemiological research in identifying public health priorities and informing intervention strategies. 	Module Contents: <ul style="list-style-type: none"> Diseases and Epidemiology, Determinants of health Indicators of Health, Epidemiological Triad Concept of causation of diseases Natural history of diseases, measuring occurrence of disease Concept of evaluation and prevention Modes of intervention Changing pattern of disease Principles of Epidemiology <ul style="list-style-type: none"> Definition and disease frequency Aims of epidemiology and epidemiology approach Measurement of mortality and morbidity Epidemiology methods Transmission of disease Host defense and immune response 	
Module 2	Communicable disease		
	LOs: Learners will be able to	Module Contents:	

	<ul style="list-style-type: none"> • Critique public health issues and communicable diseases • Describe the epidemiologic principles in control and prevention of communicable diseases. • Analyze the notifiable diseases as stipulated in the public health act. • Describe the approaches used in responding to epidemics. 	<ul style="list-style-type: none"> • Transmission through direct or indirect contact. • Direct contact - called sexually transmitted disease - HIV, gonorrhea, syphilis, and others like tetanus etc. • Indirect contact - exchange of an infected object, blood or body fluids - Influenza, etc. • Air-borne transmission - influenza, smallpox, measles, chickenpox, and tuberculosis, water-borne - Cholera • Food-borne diseases include salmonella or stomach flu. • Vector-borne diseases - malaria, Dengue. • Vertical transmission - HIV, Hepatitis B, Syphilis, rubella, and Herpes simplex virus. • Zoonotic: animal to man – rabies, H1N1, leptospirosis, salmonella, Ringworm, etc. 	
Module 3	Non-Communicable Disease		
	LOs: Learners will be able to <ul style="list-style-type: none"> • Classify basic knowledge relating to the descriptive, analytical, and applied epidemiology of chronic, non-communicable diseases. • Summarize basic knowledge relating to risk factors for chronic diseases. • Identify and access sources of data on burden of chronic disease and their risk factors in populations. 	Module contents <ul style="list-style-type: none"> • Obesity, Under nutrition, Diabetes. • Substance Abuse (tobacco use, alcohol, narcotics, hallucinogens, prescription drugs and other substances), • Ischemic Heart disease, Hypertension, Stroke, cancer. • Occupational Health issues, accidents and Injuries • Mental health – commonly occurring problems. • Genetically caused health issues. 	
Module 4	Public Health in Disaster management and Outbreaks		
	LOs: Learners will be able to <ul style="list-style-type: none"> • Assimilate the gravity of immediate measures to be taken during disaster situations • Recognise the level of preparedness during disaster situations. 	<ul style="list-style-type: none"> • Disease outbreaks in India • Nature and Scale of disaster • Preparedness plans for Disaster Management 	

		<ul style="list-style-type: none"> • Role of governmental organisations at Gram, Jilha, Taluka, State and National level 	
Assignments/ Activities towards CCE			
	<ul style="list-style-type: none"> • Students must study case studies of real-world disease outbreaks or public health emergencies, applying epidemiological principles to analyze the situations. • Organize a panel discussion by inviting experts and learn from their real-life experiences. • Presentation about role of digital media in bringing public health to the forefront.

312212	Human Nutrition		
	Major (Elective)		
Sr.No.	Modules and Outcomes	Course Contents	Cr
Course Outcomes:	At the end of this course Learners will be able to- <ul style="list-style-type: none"> • Demonstrate a comprehensive understanding of the physiological and biochemical functions of macronutrients (carbohydrates, proteins, lipids) and micronutrients (vitamins, minerals, water, electrolytes). • Analyse the role of nutrition in promoting health and preventing chronic diseases (e.g., cardiovascular disease, diabetes, obesity). • Critically evaluate current research and trends in human nutrition. • Apply knowledge of nutrient requirements across the lifespan, considering factors like pregnancy, lactation, growth and development, and aging. • Explain the impact of diet on specific health conditions and explore the principles of therapeutic nutrition. 		
Module 1	Human and Public Nutrition		1

	LOs: Learners will be able to <ul style="list-style-type: none"> • Identify food sources. • Relate to the principles of food science and discuss the relation between Food Science and Nutrition • Analyze the prominence of public nutrition. 	Module Contents: <ul style="list-style-type: none"> • Nutrition and its relation to health • Food acceptance and food behavior- Internal and external factors influencing the intake of food • Concept of public nutrition • Role of public nutritionists in the health care delivery. 	
Module 2	Nutrition during Life cycle		
	LOs: Learners will be able to <ul style="list-style-type: none"> • Summarize nutritional aspects of foods and their functions. • Identify food sources. • Discuss the principles of food science and discuss the relation between Food Science and Nutrition • Assimilate the physiological changes during growth, development and ageing and their effect on nutritional needs. 	Module Contents: <ul style="list-style-type: none"> • Basic five food groups, dietary guidelines and food pyramid • Balanced diet • Factors affecting meal planning • Overview of nutritional requirements • Body Composition –changes through the lifecycle • Planning meals for different age groups <ul style="list-style-type: none"> - Infancy - Childhood - Adolescence - Youth & middle age - Old age 	
Module 3	Role of macronutrients		
	LOs: Learners will be able to <ul style="list-style-type: none"> • Identify the different macronutrients essential in our diets. • Assimilate the impact of deficiencies caused in absence of certain macronutrients. 	Module contents Macronutrients <ul style="list-style-type: none"> • 1. Carbohydrates • 2. Proteins • 3. Fats • 4. Water - Classification, functions, sources, requirements, deficiencies - Digestion, Absorption, Transport 	
Module 4	Role of micronutrients		

	LOs: Learners will be able to <ul style="list-style-type: none"> • Identify the essential micronutrients needed in the diet. • Categorize the deficiencies and measures to combat the same. 	Micronutrients: <ul style="list-style-type: none"> • Classification of Vitamins: A,D,E,K, Thiamin, Riboflavin, Niacin, Ascorbic Acid and Minerals: Calcium, Iron and Iodine • Functions, deficiencies sources, requirements • Digestion, Absorption, transport • Conservation of nutrients 	
Assignments/ Activities towards CCE			
	<ul style="list-style-type: none"> • Make a video of any recipe that you wish to spread awareness about and inform audiences about the necessity of that recipe in their diets. • Design and execute awareness sessions for the community about the importance of nutrients. • Make short, creative videos about micronutrients and macronutrients and the importance in our diets.

352231	Research Project Major (Elective)		
Sr.No.	Modules and Outcomes	Course Contents	Cr
Course Outcomes:	At the end of this course Learners will be able to- <ul style="list-style-type: none"> • Demonstrate in-depth comprehension of a specific research topic within the student's field of study. • Apply relevant research • Methodologies and theoretical frameworks to investigate their chosen research question. • Critically evaluate existing research literature and identify gaps in knowledge. • Develop a strong foundation in research ethics and responsible research conduct. 		
Module 1	Preparing for research		1
	LOs: Learners will be able to <ul style="list-style-type: none"> • Formulate a clear and focused research question that contributes to the advancement of knowledge. • Conduct a thorough literature review to identify relevant academic sources and synthesize key findings. 	Module Contents: <ul style="list-style-type: none"> • Research Design-Identify a research area / topic / issue. • Formulating a Research Question • Choosing a Research Methodology • Gathering relevant resources in print, audio-visual format 	
Module 2	Literature Review		
	LOs: Learners will be able to <ul style="list-style-type: none"> • Categorize credible and relevant academic sources. • Critically evaluate existing research. 	Module Contents: <ul style="list-style-type: none"> • Identifying Relevant Sources • Evaluating Research Literature • Synthesis of Findings • Reviewing the research papers 	

	<ul style="list-style-type: none"> Assess its strengths and limitations of the relevant topics. 		
Module 3	Data Collection and Analysis		
	LOs: Learners will be able to <ul style="list-style-type: none"> Design the most appropriate method for their research question. Devise practical skills for data collection, such as designing surveys, conducting interviews, or collecting observational data. Analyze their data using appropriate statistical tools or qualitative coding methods 	Module contents <ul style="list-style-type: none"> Selecting Data Collection Methods Data Collection Techniques Data Analysis and Interpretation 	
Module 4	Research Ethics and Responsible Conduct		
	LOs: Learners will be able to <ul style="list-style-type: none"> Discriminate between fundamental research ethics principles, such as informed consent, confidentiality, and data privacy. Interpret and gather data ethically and responsibly. Devise strategies to address potential ethical challenges appropriately. 	Module contents <ul style="list-style-type: none"> Research Ethics Principles Responsible Data Collection Practices Addressing Ethical Dilemmas 	
Assignments/ Activities towards CCE			
	Submission of research project preferably in audio-visual format.
